

db_ans

Teen sawaal ka jawab -- kya static hai, AI kahan lagana hai, aur Web Push notification kis kis jagah chahiye.
Roman Urdu mein, seedhi baat, faltu tafseel nahi.

Section	Kya hai	Kis ke liye
Q1	Poore project ka audit -- har page/feature jo abhi bhi static ya mock data pe chal raha hai, aur usay dynamic karne ke liye kya chahiye.	Frontend + Backend dono dev
Q2	AI kahan sach mein faida dega. Sales gir jaye to AI wajah bata sakta hai ya nahi. Kaunsa free API use karein.	Owner + dono dev
Q3	Web Push notification kis kis controller action pe lagega -- sirf planning/map, koi code nahi.	Backend dev

Pehle yeh samajh lein

Yeh document 31 Aug 2026 ke code pe bana hai, accounting module complete hone ke baad. Accounting ke 9 pages (expenses, journal entries, vouchers -- list + new + detail) ab poori tarah live hain, is liye woh Q1 ki list mein nahi hain.

02 Sept 2026 -- ab tak kya ho chuka hai

Yeh document 31 Aug ko likha gaya tha. Us ke baad neech wale kaam mukammal ho chuke hain. Q1 ki list ab bhi poori rakhi hai taake pata rahe kya theek hua, lekin har item ke saath uska status hai.

Kya	Haalat	Kahan
Teen mock dashboards (accountant, order-dept, sales)	HO GAYA	3 naye endpoint /reports/dashboard/*; teenon page ab live hain. Sales wala sirf us rep ka apna data dikhata hai.
/parties/suppliers ke do jhoote cards (8 aur 2)	HO GAYA	Asli number 3 aur 3 nikle. Naya GET /purchases/summary.
/purchases/grns ke chaar jhoote cards	HO GAYA	'5 GRNs this week' asal mein 1 tha, '1,000 units' asal mein 3,945. QtyDamaged column pehle se maujood tha -- schema change ki zaroorat nahi pari.
162 line dead code (grns page)	HO GAYA	Nikaal diya. File 355 se 177 line ki reh gayi.
Notification table mein koi likhta nahi tha	HO GAYA	PushNotificationService. Q3 ke chalees ke chalees trigger points lag chuke hain. Title: "VIZO -- Order created by Zara", VIZO logo ke saath.
FilterBar ka dead 'Filters' button	HO GAYA	Bara ke bara page se hata diya -- us ka onClick tha hi nahi.
Top Category sirf 'this page' ka tha	HO GAYA	Ab server poore filter par calculate karta hai.
getChannel / RoleKey client mein data module se aa rahe thay	HO GAYA	lib/app-config.ts ban gayi. 767 line ki seed file ab browser tak nahi jati.
Q2 -- AI	HO GAYA	Gemini client + 9 features. Numbers pehle SQL se, phir AI sirf samjhata hai. Key na ho to sirf tafseer gayab hoti hai, numbers rehte hain.
Q3 -- Web Push	HO GAYA	WebPush package, VAPID, service worker, /profile/notifications par per-user on/off (42 kism), aur chalees trigger points.

Do cheezein jo is document ke baad mili aur zyada zaroori thin

1. Public repo mein paanch asli password parhe jaa sakte thay. appsettings.json GitHub par tha, aur us mein Neon ka connection string (password ke saath), JWT key, dono Cloudinary secrets aur Gmail app password sab plain text mein. JWT key badal di gayi hai; **baaqi chaar aap ko provider par ja kar badalne hain** -- git history mein woh abhi bhi parhe jaa sakte hain.

2. Fiscal calendar 31 Aug par khatam thi. September aa gaya to har posting ruk gayi -- expense approve, voucher post, journal entry, sab. Migration 14 ne 2027 tak mahiney khol diye. **Yeh khatam hone se pehle phir barhana paray ga.**

Q1 -- Abhi tak kya static ya mock hai

Poora repo scan kiya -- 92 app pages, 24 backend controllers. Neeche sirf woh cheezein hain jo **abhi bhi jhooti hain**: ya to mock file se aa rahi hain, ya seedha markup mein type ki hui hain. Baaqi sab database se aa raha hai.

Sabse bara masla: teen dashboard

Chaar mein se teen dashboard poori tarah mock hain. Yeh sabse pehla kaam hona chahiye -- user login karte hi yehi screen dekhta hai, aur abhi jo numbers dikh rahe hain woh kisi ke bhi nahi hain.

Page / File	Kya jhoota hai	Dynamic karne ke liye kya chahiye
Accountant Dashboard components/portals/accountant/ accountant-dashboard.tsx <i>275 lines, axios: 0</i>	Sab kuch. Import kar raha hai: @/data/collections @/data/purchases @/data/mock Cash position, collections, payables due -- har figure mock file se.	Ek naya endpoint: GET /reports/dashboard/accountant Isme: cash + bank balance (Account jinka type 'Cash & Bank'), aaj/is mahine ki receipts aur payments (Voucher), payables due (PurchaseInvoice - allocations), receivables aging (SalesInvoice), draft expenses ka count. <i>Sab data pehle se DB mein hai -- sirf ek query aur ek page rewrite chahiye.</i>
Order Dept Dashboard components/portals/order-dept/ order-dept-dashboard.tsx <i>269 lines, axios: 0</i>	Sab kuch. Import: @/data/sales @/data/claims @/data/products Pending orders, packing queue, claims, low stock -- sab nakli.	GET /reports/dashboard/order-dept Isme: status ke hisaab se order count (SUBMITTED / CONFIRMED / PROCESSING / PACKED), packing queue ki length, open claims (Claim jahan status settle nahi hua), low-stock items (Stock.Qty < Product.ReorderLevel), aaj ke dispatch.
Sales Dashboard components/portals/sales/ sales-dashboard.tsx <i>356 lines, axios: 0</i>	Sab kuch. Import: @/data/sales @/data/collections Rep ke apne orders, target, collections, customer visits.	GET /reports/dashboard/sales Zaroori: yeh sirf <i>logged-in rep ke apne numbers</i> de -- SalesOrder.SalesPersonUserId == CurrentUserId(). Isme: is mahine ke orders aur unki value, collection jo abhi baqi hai, credit-hold pe atke hue orders, aaj ke visits.

Super Admin dashboard theek hai

components/portals/super-admin/super-admin-dashboard.tsx mein 5 axios call hain aur woh live hai. Baaqi teen ko banate waqt isi ko pattern ki tarah dekhein -- naya tareeqa ijaad karne ki zaroorat nahi.

Woh cards jinke number markup mein type kiye gaye hain

Yeh pages baaqi sab kuch database se le rahe hain, lekin upar ke summary cards mein kuch numbers **seedha HTML mein likhe hue** hain. Yeh sabse khatarnaak qism ki galti hai -- page live lagta hai, is liye koi shak nahi karta.

Page	Jo card jhoota hai	Theek karne ka tareeqa
/parties/suppliers parties/suppliers/page.tsx:233, 239	Open POs = 8 Pending GRNs = 2 Dono markup mein hardcoded. Isi page ka 'Total Payable' card sahi hai -- woh calculate hota hai.	Supplier list endpoint mein do count add karein: PurchaseOrder jahan status APPROVED/PARTIALLY_RECEIVED, aur GoodsReceipt jo abhi invoice nahi hui. Ya alag GET /purchases/summary.
/purchases/grns purchases/grns/page.tsx:314- 336	GRNs This Week = 5 In Transit (POs) = 2 Units Received = 1,000 Damaged Units = 9 Chaaron hardcoded. Neeche ki table live hai.	GRN list endpoint mein yeh chaar figure wapas bhejin (poore filter par, sirf mojudaa page par nahi). Damaged units ke liye GoodsReceiptLine mein damaged qty ka column check karna hoga -- agar nahi hai to pehle woh chahiye.

Isi page pe 162 line dead code bhi hai

purchases/grns/page.tsx ki 355 lines mein se 162 comment kiye hue puraane version ki hain. Nikaal dein -- do version ek file mein rakhne ka matlab hai ke agla banda ghalat wala parh lega.

Notification ki ghanti bajti hi nahi

Cheez	Mojooda haalat
Notification table	DB mein maujood hai: NotificationId, UserId, SeverityId, Icon, Title, Body, CreatedAt, IsRead. Andar sirf 6 seed rows hain.
NotificationController	Teen endpoint hain -- GET /, POST /{id}/read, POST /read-all. Sab sirf parhne ke liye.
Likhata kaun hai?	Koi nahi. Poore backend mein ek bhi jagah Notifications.Add(...) nahi hai. Matlab header ki ghanti sirf woh 6 purani seed rows dikhati hai aur kabhi badalti nahi.
Kya chahiye	Har status-change ke baad Notification row likhni hai. Poori list Q3 mein hai -- wahi list Web Push ke trigger points bhi hai. Dono ek hi jagah se chalein ge, sirf delivery ka tareeqa alag hoga.

Chhoti cheezein

Kahan	Kya	Kitna zaroori
components/ui/filter-bar.tsx	Ek 'Filters' button jo kuch nahi kholta. Ab jin pages ne apne asli filter diye hain wahan nahi dikhta, lekin baaqi tamam list pages pe abhi bhi maujood hai aur dabane se kuch nahi hota.	Medium -- dead button user ka waqt zaya karta hai
accounting/expenses/page.tsx	'Top Category' card sirf mojooda page ki rows par bana hai, poore filter par nahi. Label mein saaf likha hai '(this page)', is liye jhoot nahi -- lekin adhoora hai.	Kam -- pehle server se yeh figure bhejna parayga
sales/orders/page.tsx login/page.tsx	@/data/settings se getChannel / RoleKey import karte hain. Yeh data nahi, config/type hai -- is liye ghalat nahi. Lekin AGENTS.md kehta hai client component mein data module import na karein, kyunke poori file browser tak jati hai.	Kam -- correctness ka masla nahi, bundle size ka hai

Q1 ka khulasa

Kya	Kitna
Kul app pages	92
Pages jo API se data lete hain	86 (93%)
Pages jinme koi API call nahi	6 -- dashboard, setup, login-side, error pages
Poori tarah mock components	3 dashboards (accountant, order-dept, sales)
Live page, jhoote cards	2 pages , kul 6 numbers
Notification likhne wali jagah	0 -- table aur API dono khali baithe hain

Q2 -- AI kahan lagayen, aur kaunsa AI

Sabse aham baat, shuru mein hi

AI se **hisaab mat karwayen**. Sales kitni giri, kaunsa item ruka, kis customer ne kharidna chhora -- yeh sab **SQL ka kaam hai** aur DB mein pehle se maujood hai. AI ka kaam yeh hai ke un numbers ko **parh kar batae ke matlab kya hai** aur **ab kya karna chahiye**.

Agar AI se seedha poochenge 'sales kyun giri', woh *andaza* laga kar likh dega -- aur woh andaza bilkul asli lagega. Aap us par faisla karenge aur nuqsan hoga. Pehle numbers nikaalen, phir woh numbers AI ko dein.

Aap ka asal sawal: 20 lakh se 5 lakh -- AI wajah bata sakta hai?

Haan -- lekin do qadam mein. Pehle system khud numbers todta hai, phir AI unhe insaan ki zubaan mein samjhata hai.

Qadam	Kaun karega	Kya nikalta hai
1. Number todna Yeh 100% SQL hai	Backend -- ek naya GET /reports/sales-drop	Pichhle mahine ka 20 lakh aur is mahine ka 5 lakh ko tor kar dikhaye: • Customer ke hisaab se: kis kis ne kam kharida, kis ne bilkul chhor diya • Product/brand ke hisaab se: kaunsi cheez ki sale giri • Stock: woh items jo bikte thay aur ab out-of-stock hain • Price: is mahine average selling price aur discount kitna badla • Rep ke hisaab se: kis salesperson ka number gira • Expense: kaunsa kharcha achanak barha
2. Samjhana	AI -- upar wala JSON de kar	AI likh kar deta hai: <i>'5 lakh mein se 9 lakh ki kami sirf 3 customers se hai -- Blue Area Distributors ne 4 mahine baad pehli baar kuch nahi liya. Doosri bari wajah Samsung ke 4 SKU hain jo 12 din out of stock rahe. Pehle Blue Area ko call karein.'</i>

Is tarah AI kabhi number ghalat nahi bata sakta, kyunke number woh bana hi nahi raha. Woh sirf tarteeb aur zubaan de raha hai -- aur wohi kaam woh sach mein acha karta hai.

Feature ki list -- kahan lagega, kya karega

Feature	Kahan lagega (page/module)	Kya parhega -- kya dega
1. Sales gir gayi -- kyun? Sabse pehle yeh banayein	/reports/sales-summary aur Super Admin dashboard par ek 'Explain' button	Parhega: upar wale qadam 1 ka JSON (customer, product, stock, price, rep, expense breakdown) Dega: 4-6 line ka jawab -- badi wajoohat tarteeb se, aur 3 kaam jo abhi karne hain
2. Anomaly alert	Roz raat ko background job; nateeja Notification aur dashboard par	Parhega: aaj ke sales, expense, stock movement vs pichhle 90 din ka average Dega: sirf woh cheezein jo hadd se bahar hain -- 'aaj cash sale 70% kam', 'Rent Expense pichhle mahine se 3 guna'. AI se pehle simple average+deviation se filter karein, warna har roz shor machay ga
3. Customer chhor kar ja raha hai (churn)	/parties/customers par ek 'At risk' tab Sales dashboard par bhi	Parhega: har customer ka order pattern -- pehle har X din order karta tha, ab kitne din se nahi kiya, average order value girti ja rahi hai ya nahi Dega: risk list + har customer ke liye ek line ke woh kyun ruka lagta hai

Feature	Kahan lagega (page/module)	Kya parhega -> kya dega
4. Kitna maal mangwana hai (demand forecast)	/inventory/stock aur /purchases/orders/new	Parhega: pichhle 6-12 mahine ki sale per item, mojudaa stock, supplier ka lead time Dega: har item ke liye 'X pieces, Y din mein' + PO draft ka suggestion. <i>Note: asal forecast simple moving-average se karein; AI sirf wajah likhe aur mausam/event ka asar samjhaye.</i>
5. Dead stock aur paisa jo phansa hua hai	/reports/dead-stock /reports/slow-moving (dono pages pehle se live hain)	Parhega: mojudaa dead-stock report ka data Dega: kya karein -- discount kitna, bundle kis ke saath, ya supplier ko wapas. Har item ke liye ek line, aur kitna paisa phansa hua hai
6. Recovery -- kis ko pehle call karein	/reports/aging/customer /accounting/collections	Parhega: aging buckets, har customer ki payment history, credit limit, purane wade Dega: call karne ki tarteeb -- sirf 'sab se purana' nahi balke 'is se paisa milne ka imkan zyada hai'. Saath mein WhatsApp reminder ka draft
7. Price aur margin	/inventory/products/[id] /sales/direct par warning	Parhega: item ka cost, mojudaa price, diye gaye discount, competitor ka rate (agar rakha ho) Dega: 'is item par 3 mahine se margin 4% par hai', 'is discount pe nuqsan hoga'
8. Report Urdu/English mein poochein Chatbot	Header ka search box (Cmd+K) -- wahi jagah pehle se maujood hai	Parhega: user ka sawal -> AI usay ek pehle se likhe hue endpoint mein badle Dega: jawab + us report ka link. Khabardar: AI ko SQL likhne ki ijazat na dein. Sirf mojudaa endpoints mein se chunne dein. Warna woh kisi din DELETE likh dega.
9. Mahine ka khulasa khud likh de	Month-end par email/WhatsApp /reports par bhi	Parhega: mahine ka P&L, top customers, top products, aging, expense breakdown Dega: ek safha -- kya acha hua, kya bura, agle mahine kya dekhna hai. Owner ko roz login karne ki zaroorat nahi rahegi

Kis se shuru karein

Tarteeb	Feature	Kyun pehle	Mehnat
1	Sales drop explain (#1)	Aap ka asal sawal yehi hai, aur data poora maujood hai	2-3 din
2	Recovery tarteeb (#6)	Seedha cash lata hai. Aging report pehle se live hai	1-2 din
3	Anomaly alert (#2)	Notification system waise bhi Q3 mein ban raha hai -- saath bana lein	2 din
4	Dead stock advice (#5)	Report maujood hai, sirf AI ki ek layer chahiye	1 din
5	Baaqi sab	Upar wale chaar chal jayen tab	--

Kaunsa AI provider -- free API key ke saath

Chaaron ko dekha. Faisla neech hai, phir wajah.

Provider	Free mein kya milta hai	Achi baat	Buri baat
Google Gemini Gemini 2.x Flash	Free tier asli hai -- rozana achi khaasi limit, credit card ki zaroorat nahi. Bohot bara context (poori report aik dafa mein)	- Seedha REST -- C# se HttpClient se ho jata hai, koi SDK nahi - JSON output force kar sakte hain - Roman Urdu acha samajhta aur likhta hai - Paid pe jana ho to sirf key badalni hai	Free tier par rate limit hai -- background job mein thora ruk ruk ke bhejna hoga

Provider	Free mein kya milta hai	Achi baat	Buri baat
Groq	Free tier, roz ki limit ke saath. Open models (Llama etc.)	• Bohot tez -- jawab foran • OpenAI jaisa API, likhna asaan	• Context chhota • Model kabhi bhi hata diya jata hai • Urdu/Roman Urdu Gemini se kamzor
OpenRouter free models	Kuch models bilkul free	• Ek key se bohot se models • Test karne ke liye behtareen	• Free models qatar mein lagte hain, kabhi kabhi bohot slow • Production ke liye bharosay ke laiq nahi
Hugging Face Inference API	Free tier bohot mehdood	• Models ki bharmaar	• Model 'so' jata hai, pehli call 20-30 second • Business app ke liye theek nahi

Faisla: Google Gemini (Flash) lein

Teen wajah:

1. **Paisa** -- free tier itna hai ke is business ka pura load uthata hai. Roz ka anomaly check + mahine ka khulasa + kabhi kabhi 'explain' -- 100 call se kam. Free tier mein araam se aa jata hai.
2. **Lagana asaan** -- plain REST hai. Aap ke backend mein pehle se `HttpClient` aur `System.Text.Json` maujood hain (Cloudinary upload isi tarah hota hai). Koi naya NuGet package nahi -- aur is project ka usool hi yehi raha hai ke package tab lein jab bagair chara na ho.
3. **Kaam ka** -- bara context matlab poori monthly report ek hi call mein bhej sakte hain, tukron mein torna nahi parta. Aur Roman Urdu mein jawab acha deta hai, jo yahan asal zaroorat hai.

Groq ko doosre number par rakhein -- agar kabhi chatbot chahiye jahan jawab foran chahiye. Us waqt sirf ek aur provider class likhni paray gi.

Banate waqt yeh teen usool na bhoolein

1. **API key appsettings mein rakhein, code mein nahi.** Cloudinary ki tarah. Aur key kabhi browser tak na jaye -- AI ki har call backend se ho, warna key network tab mein kisi ko bhi mil jayegi.
2. **AI ka jawab hamesha 'shayad' hai.** Screen par saaf likhein ke yeh AI ne likha hai. Kabhi bhi AI ke likhe number ko ledger mein na daalein aur na hi us par khud-ba-khud koi kaam karwayen.
3. **AI band ho jaye to app chalta rahe.** Cloudinary wala usool yahan bhi -- call fail ho to log karein aur nigal jayen. Sale is liye nahi rukni chahiye ke Google ka server down tha.

Q3 -- Web Push notification kahan kahan lagana hai

Yeh sirf naqsha hai -- code is mein nahi

Aap ne kaha tha sirf plan banayein. To yahan sirf **jagah ki list** hai: kaunsa controller, kaunsa action, kis ne chalaya, kis ko khabar jaye, aur message kya ho. Na koi endpoint, na Web Push ka setup, na koi implementation.

Technical baatein (sirf record ke liye)

Tareeqa	Web Push -- SignalR/WebSocket nahi. Browser aur mobile dono par chalta hai, aur phone ko vibrate bhi kar sakta hai. App band ho tab bhi pohanchta hai.
Kahan lagega	Har relevant controller action ke bilkul aakhir mein -- jab DB ka kaam kamyabi se ho chuka ho. Pehle nahi.
Ek zaroori baat	Push bhejne mein agar masla ho to request fail na karein . Yeh wahi usool hai jo DocumentArchive mein pehle se hai -- log karo aur nigal jao. Order ban chuka, stock hil chuka, paisa aa chuka. Sirf is liye 'order nahi bana' kehna ke notification atak gayi -- operator dobara order daal dega.
Saath hi	Har push ke saath Notification table mein row bhi likhein . Push us waqt ke liye hai, table history ke liye. Q1 mein likha tha ke table maujood hai lekin koi likhta nahi -- yeh wohi kaam poora karega.
Admin ka usool	Aap ne kaha Admin ko har cheez ki khabar jaye. To neeche har row mein Admin شامل hai. Lekin ek sujhaao: Admin ke liye 'foran vibrate' sirf paisa aur exception wali cheezon par rakhein, baaqi khamosh reh kar ghanti mein jama hoti rahein -- warna Admin do din mein notification band kar dega.

A. Sale ka safar -- woh flow jo aap ne likha tha

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
A1	SalesController -> CreateOrder POST /sales/orders	Sales	Admin Order Dept Warehouse	Naya order ORD-26-0145 -- Blue Area Distributors, PKR 2,18,000. Zara Malik ne banaya.
A2	SalesController -> SetOrderStatus PATCH .../status = CONFIRMED	Order Dept	Admin Sales (jis ne order liya)	Aap ka order ORD-26-0145 confirm ho gaya.
A3	InventoryController -> CreateTransfer POST /inventory/transfers	Order Dept	Admin Warehouse Shop 2 (jahan se maal mangaya)	Stock ki farmaish TRF-26-0028 -- Warehouse se Order Dept, 12 items.
A4	InventoryController -> CreateTransfer (bhejne wala qadam)	Warehouse	Admin Order Dept	TRF-26-0028 bhej diya gaya -- 12 items raasty mein. Note: abhi transfer ek hi qadam mein banta aur bhejta hai. 'Bheja' aur 'bana' alag karne ke liye ek status column chahiye.
A5	InventoryController -> ReceiveTransfer POST .../{id}/receive	Order Dept	Admin Warehouse (jis ne bheja)	TRF-26-0028 wasool ho gaya -- 12 items Order Dept mein.
A6	PackingController -> Pack POST /packing/{id}/pack	Order Dept	Admin Sales Dispatch	ORD-26-0145 pack ho gaya -- dispatch ke liye tayyar.
A7	DispatchController -> Dispatch POST /dispatch/{id}/dispatch	Order Dept / Dispatch	Admin Sales Accountant	ORD-26-0145 nikal gaya -- TCS, tracking 4455667788.

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
A8	DeliveryController -> ConfirmDelivery POST /delivery/{id}/confirm	Order Dept / Dispatch	Admin Sales Accountant	ORD-26-0145 customer tak pohanch gaya.
A9	DeliveryController -> SettleCod POST .../settle-cod	Accountant	Admin Sales	COD ki raqam mil gayi -- ORD-26-0145, PKR 2,18,000.

B. Sale aur customer ke baaqi mor

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
B1	SalesController -> CreateOrder agar CREDIT_HOLD lage	Sales (khud-ba-khud)	Admin Accountant Sales	ORD-26-0146 limit cross ki wajah se ruk gaya -- Mobile Zone, PKR 3,40,000 baqi hai. Yeh sabse zaroori push hai -- yahan paisa atka hua hai.
B2	SalesController -> OverrideCreditHold	Admin / Accountant	Admin Order Dept Sales	ORD-26-0146 ki limit maaf kar di gayi -- ab aage barh sakta hai.
B3	SalesController -> InvoiceOrder	Order Dept / Accountant	Admin Accountant Sales	INV-26-8873 ban gaya -- ORD-26-0145 ka, PKR 2,18,000.
B4	SalesController -> CreateInvoice (seedha invoice)	Accountant	Admin Accountant	Naya invoice INV-26-8874 -- bagair order ke.
B5	SalesController -> CounterSale POST /sales/direct	Sales / Shop	Admin Accountant	Counter sale INV-26-8875 -- PKR 14,500 cash. Yeh khamosh rakhein -- din mein bohot hoti hain
B6	SalesController -> CreateReturn	Sales / Order Dept	Admin Accountant Warehouse	Wapsi ki darkhwast SR-26-0044 -- 3 items, PKR 22,000. Manzoori chahiye.
B7	SalesController -> SetReturnStatus manzoor / na-manzoor	Accountant / Admin	Admin Sales (jis ne bheji) Warehouse	SR-26-0044 manzoor -- stock wapas aa gaya, credit note ban raha hai. ya: SR-26-0044 na-manzoor -- wajah: dabba khula hua tha.

C. Paisa -- accounting

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
C1	AccountingController -> CreateExpense	Koi bhi staff	Admin Accountant	Naya kharcha EXP-26-0029 -- Nayatel, PKR 18,500. Manzoori ka intezar.
C2	AccountingController -> SetExpenseStatus POSTED ya REJECTED	Accountant	Admin Jis ne kharcha daala tha	EXP-26-0029 manzoor -- ledger mein chala gaya. ya: EXP-26-0029 na-manzoor -- wajah: bill nahi laga.
C3	AccountingController -> ReverseExpense	Accountant	Admin Accountant	EXP-26-0027 wapas kar diya gaya (JV-26-0181) -- ghalat account mein tha.
C4	AccountingController -> PostJournalEntry	Accountant	Admin	JV-26-0182 post ho gaya -- PKR 35,000, 2 lines.

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
C5	AccountingController -> ReverseJournalEntry	Accountant	Admin Accountant	JV-26-0182 ulat diya gaya JV-26-0183 se -- wajah: kiraya bank se gaya tha.
C6	AccountingController -> PostVoucher	Accountant	Admin Sales (us customer ka rep)	Raqam mil gayi -- RV-26-0513, Blue Area se PKR 30,800. INV-26-0139 par lagi.
C7	AccountingController -> CancelVoucher	Accountant	Admin Accountant Sales	RV-26-0513 cancel -- cheque bounce ho gaya. Invoice phir se baqi hai. Zaroori push -- rep ko pata hona chahiye ke paisa wapas chala gaya
C8	AccountingController -> ConfirmCollection	Accountant	Admin Jis rep ne collect kiya	Aap ki collection PKR 45,000 confirm ho gayi.
C9	AccountingController -> ClosePeriod -> ReopenPeriod	Accountant / Admin	Admin Accountant	Aug 2026 band kar diya gaya -- ab is mein entry nahi ho sakti.

D. Kharidari aur stock

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
D1	PurchasesController -> CreatePurchaseOrder	Order Dept / Admin	Admin Accountant	Naya PO-26-0066 -- China Mobile Plaza, PKR 4,82,000. Manzoori chahiye.
D2	PurchasesController -> ApprovePurchaseOrder	Admin	Admin Order Dept Accountant	PO-26-0066 manzoor -- supplier ko bhej sakte hain.
D3	PurchasesController -> CreateGrn	Warehouse	Admin Order Dept Accountant	Maal aa gaya GRN-26-0091 -- PO-26-0066 ka, 240 pieces.
D4	PurchasesController -> CreatePurchaseInvoice	Accountant	Admin Accountant	Supplier ka bill PI-26-0043 -- PKR 4,82,000, due 30 Sept.
D5	PurchasesController -> CreatePurchaseReturn	Warehouse / Order Dept	Admin Accountant	Supplier ko wapsi PR-26-0011 -- 8 pieces kharab.
D6	InventoryController -> CreateAdjustment	Order Dept / Warehouse	Admin Accountant	Stock durusti ADJ-26-0036 -- 4 items, PKR 12,400 ka farq. Admin ko hamesha bhejein -- stock ghatana ya barhana chori chhupane ka aasaan tareeqa hai
D7	Background job (controller nahi -- roz chalega)	System	Admin Order Dept Warehouse	7 items reorder level se neeche -- Samsung A15 sirf 3 bache hain. Roz sirf ek baar, ek hi notification mein sab items

E. Claims aur delivery

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
E1	ClaimsController -> Create	Order Dept / Warehouse	Admin Accountant	Naya claim CLM-26-0144 -- 5 kharab pieces, PKR 32,000.
E2	ClaimsController -> SendToSupplier	Order Dept	Admin	CLM-26-0144 supplier ko bhej diya gaya.

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
E3	ClaimsController -> Remind	Order Dept	Admin	CLM-26-0144 ka reminder gaya -- 21 din se jawab nahi.
E4	ClaimsController -> Settle	Order Dept / Accountant	Admin Accountant	CLM-26-0144 nimta -- PKR 32,000 ka credit mil gaya.

F. Setup aur security

#	Controller -> Action	Kis ne chalaya	Kis ko khabar	Message misaal
F1	AdminUsersController -> Create / Update / Deactivate	Admin	Admin (sirf doosre admins)	Naya user bana: Ali Raza, Order Department.
F2	AdminRolesController -> permissions badalna	Admin	Admin	Sales role ko 'limits.manage' de diya gaya. Yeh hamesha bhejein -- kisi ko ijazat dena sab se hassas kaam hai
F3	AdminBackupController -> Backup	Admin	Admin	Backup mukammal -- 18.4 MB.
F4	AuthController -> Login (nakaam koshishein)	System	Admin	admin@advpos.pk par 5 baar ghalat password -- 10 minute ke liye band.

Kul milakar

Hissa	Kitne trigger
A -- Sale ka safar (aap wala flow)	9
B -- Sale/customer ke baaqi mor	7
C -- Accounting	9
D -- Kharidari aur stock	7
E -- Claims aur delivery	4
F -- Setup aur security	4
Kul	40 jagah

Aakhri mashwara -- 40 ek saath mat banayein

Pehle sirf **A1 se A9** banayein -- wohi flow jo aap ne likha tha. Ek dafa notification likhne wala hissa aur push bhejne wala hissa chal gaya, to baaqi 31 sirf ek ek line ka kaam hain.

Aur shuru se hi **har user ko yeh ikhtiyar dein ke kaunsi cheez ka push chahiye**. Bagair is ke, do hafte mein sab log notification band kar denge -- aur phir woh credit-hold wala alert bhi kisi ko nahi milega, jo asal mein zaroori tha.
